

Highcharts with Reactjs

1. Firstly friends we need fresh react set up and for this, we need to run below commands into our terminal or if you already have then no need for this step. Importantly we should have latest node version installed on our system:

```
1. npx create-react-app therichpost
2.
3. cd therichpost
4.
5. npm start //this will make project run on browser http://localhost:3000/
```

2. Now friends we need to run below commands into our project terminal to get react highcharts module which will help us to achieve this post working:

```
1. npm install react-highcharts --save
2.
3. npm install highcharts
4.
5. npm start
```

3. Finally friends we just need to add below code inside our project/src/App.js file to get final output on browser:

```
1. import React from 'react';
2. import './App.css';
3.
4. //HighChart Modules
5. import ReactHighcharts from "react-highcharts";
6.
7.
8. //HighCharts settings, type and data
9.
10. const config = {
11.   chart: {
12.     type: 'spline'
13.   },
14.   title: {
15.     text: 'My chart'
16.   },
17.   series: [
18.     {
19.       data: [1, 2, 1, 4, 3]
20.     }
21.   ]
22. };
23. class App extends React.Component {
24.   render() {
25.     return (
```

```
26. <div>
27. <h1>Highcharts with Reactjs</h1>
28. <ReactHighcharts config={config}></ReactHighcharts>
29. </div>
30. )
31. };
32. }
33.
34. export default App;
```
